My name is Pizon Shetu, I am a graduate of Queens College with a double major in Bachelor of Arts in Computer Science and Applied Math. I am an aspiring Data Scientist currently enrolled in Springboard Data Science Bootcamp. I am looking for opportunities in New York City area in fields of finance, tech, and companies working with large data.

I am well-versed in python and its libraries which enable to me to clean, explore and manipulate data. I have done countless projects within Springboard Curriculum, as well as personal projects. A more notable project I worked on was the NYC housing market dataset by Zillow's API where I cleaned, wrangled, and did exploratory data analysis to find statistical summaries of different sub-markets and house prices in the NYC area. I was able to create a train/test split given the large dataset and then implement a machine learning model which predicts housing prices with an 80% accuracy.

I love the storytelling that comes from data and how it unravels the hidden truth, my passion is explaining the unexplainable using graphical representation. I want to contribute to a larger cause even if it is with a lesser role but a role which allows me to learn and gain valuable experience to further my career.
